OS - 3.3 | Manhole Protection

Revision:

A

Section:

3.0 - Infrastructure Stage 1

Visual Aids

Information

Objective	Application
● To adequately protect watercourses during the construction phase ● To reduce blockages and damage to drainage lines	● All adoptable manholes
Instructions	
● Wall ties are to be installed on the bottom raising section – use three on each side of the raising section (a total of 12) ● Cut a correx board to fit neatly into the manhole ● Cut two zip tie lifting handles ● Site the correx board on the wall ties ● Before placing sub-base, fill the lifting eyes on the biscuit full of sand – this allows easy access if the biscuit needs to be removed at a later date ● Periodically check the board throughout the build process – removing any waste build ups or replacing if broken
