| Title:                    | Correct Use and need for Radii kerbs                                                                                                                                      | Reference No:                                                                                                                                                                                                                                                                                  | QA46                       |
| Issued By:                | Sam James                                                                                                                                                                 | Issue Date:                                                                                                                                                                                                                                                                                    | 19 <sup>th</sup> June 2025 |
| Type of Alert:            | Quality & Compliance                                                                                                                                                      |                                                                                                                                                                                                                                                                                                |                            |
| Subject:                  | Radii Kerb Understanding                                                                                                                                                  |                                                                                                                                                                                                                                                                                                |                            |
| Operatives Affected:      | Engineers and Site managers and operatives                                                                                                                                |                                                                                                                                                                                                                                                                                                |                            |
| Details:                  | When Kerbing and ordering Kerbs the correct use of Radius kerbs must be understood and ordered correctly                                                                  | All kerb radii are to be designed using available manufactured radius units of the style of kerb chosen. Radii between 12m & 20m require the use of 600mm long straights. No cut kerb or edge will be less than 300mm in length, mitred joints will not be permitted, radius kerbs should be u |                            |
| Action Required:          | When ordering Kerbs make sure radius kerbs used below 12m and 600mm long straights ordered and layed between 12-20m unless specified other in specific site documentation |                                                                                                                                                                                                                                                                                                |                            |
| Further Information:      |                                                                                        | Incorrect Use of Straight kerbs on a roundabout                                                                                                                                                                                                                                                |                            |
